Preface

The tenth edition of the Statistical Abstract of Utah - 1987 represents an important milestone in several respects. First, it responds to the continuing and expanding demand to gather in one place, for easy reference, a large quantity of data about Utah. Second, this edition like those that have preceded it, represents response to recorded needs of the thousands of users who indicate by their phone calls, correspondence, and visits to the Bureau their needs for data about Utah. It also represents the evolving data generating processes of a large number of public and private statistical gathering agencies who try to keep accurate score regarding an increasingly complex and global economy. Finally, this edition symbolizes the dramatic changes in technology where large data bases can be stored on a few floppy disks and the data can be disseminated either electronically or in hard copy. All of these trends in information processing will continue. Fortunately, additions to the data, the reformatting of tables, and production of camera- ready copy have become much easier, and are therefore more timely and accurate.

With this edition, as with others published over the past 40 years, the comments and suggestions of users will be both helpful and appreciated. Suggestions for improvement will be incorporated in future editions to the extent possible.

This edition of the Statistical Abstract of Utah - 1987 has benefited from the contribution of many people who cannot be individually mentioned. Bureau of Economic and Business Research staff members who contributed in a major way to the completion of this edition were: Janice Austin, Ronda Brinkerhoff, Joan Doty, Diane Gillam, Douglas Meredith, Austin Sargent, Holly Southwick, Alok Vaish, and Mari Lou Wood.

The Bureau is indebted to many agencies and organizations for assistance, including the following Utah State offices: Department of Employment Security, Bureau of Health Statistics, State Office of Education, Office of the Commissioner of Higher Education, Division of Family Services, Office of the Lieutenant Governor, Department of Natural Resources, Public Service Commission, State Data Center, State Tax Commission, and Department of Highways. Data were also obtained from numerous federal statistical agencies. We especially acknowledge indebtedness to the Bureau of the Census, Bureau of Economic Analysis, and the Bureau of Labor Statistics. The Utah Foundation data are gratefully acknowledged.

Finally, appreciation must be expressed for the continuing support of the University of Utah administration, particularly President of the University, Chase N. Peterson, and Dean of the Graduate School of Business, Iver E. Bradley.

(a) Full-time equivalent is a computed statistic representing the number of full-time employees that could have been employed if all personnel were engaged on a full-time basis at the average monthly pay applying to full-time workers. It is calculated, for a particular function of a government, by dividing the average monthly pay for full-time employees of that function into the total pay for all full- and part-time employees in the function.

(a) A number of changes in the definition of manufacturing industries has occurred over the years. The changes in procedure, however, have not appreciably affected the comparability of the historical data except for the figures on the number of establishments.

(b) Beginning in 1978 data is available every five years.

(p) Preliminary

(a) Prior to 1974, the definition of a farm was based primarily on a combination of number of acres and value of agricultural products sold. For 1974 and beyond, a farm is defined to include all land on which agricultural operations were conducted and from which $1,000 or more of agricultural products were sold.
